 - NH₃ het sterker intermolekulêre kragte as N₂ en daarom 'n hoër kookpunt as N₂
- OR
- N₂ het swakker intermolekulêre kragte as NH₃ en daarom 'n laer kookpunt as NH₃
(Aanvaar: NH₃ vereis meer energie om sterker kragte te oorkom)
- 3.2 H₂ ✓ (1)

- 3.3
- H_2 and N_2 both have weak London forces/induced dipole forces ✓
 - N_2 is a larger molecule/has a greater molecular mass/has a larger surface area than H_2 ✓
 - and therefore N_2 has stronger intermolecular forces. ✓

QUESTION 4/VRAAG 4

- 4.1 Boyle's law/Boyle se wet ✓ (1)

4.2

Criteria for hypothesis/Riglyne vir hipotese	
The dependent and independent variables are stated correctly. Die afhanklike en onafhanklike veranderlikes korrek genoem.	✓
State the relationship between the dependent and independent variables. Stel die verwantskap tussen die afhanklike en onafhanklike veranderlike.	✓
Dependent variable/afhanklike veranderlike: volume	
Independent variable/onafhanklike veranderlike: pressure/druk	

Example/Voorbeeld:

If the pressure of and enclosed gas increases the volume will decrease at constant temperature.

The pressure of an enclosed gas is inversely proportional to the volume it occupies if the temperature is kept constant.

Die druk van 'n ingeslote gas is omgekeerd eweredig aan die volume wat dit beslaan indien die temperatuur konstant gehou word.

Indien die druk van 'n ingeslote gas toeneem, sal die volume afneem.

4.3

Refer to the last page of the memo for the graph drawn to scale
Verwys na die laaste bladsy van die memo vir die skaalgrafiek

Criteria for marking the graph/Nasienkriteria vir grafiek

Use of correct scale on both axis (If learners used table values as scale values maximum $\frac{1}{3}$ for line drawn) Korrekte skaal op die asse (Indien leerders tabelwaardes as skaalwaardes gebruik maksimum $\frac{1}{3}$ vir lyn getrek)	✓
At least five (5) points plotted correctly Ten minste vyf (5) punte korrek gestip	✓
Curve is drawn Kurve getrek	✓

(3)

- 4.4 Any set of values can be used from the table :

Enige stel waardes vanaf die tabel kan gebruik word:

$$p_1 V_1 = p_2 V_2 \quad \checkmark$$

$$70(174) = (300)V_2 \quad \checkmark$$

$$V_2 = 40,5 \text{ dm}^3 \quad \checkmark$$

(Accept/Aanvaar 40,32 – 40,8 dm³)

(3)

- 4.5 At high pressure a gas starts to deviate from ideal gas behaviour ✓

because the volume of the molecules of a gas and the intermolecular forces start to influence the measured value, causing it to be greater than the theoretical value calculated/Forces of repulsion between the gas particles prevents them from moving closer ✓

By hoë druk sal 'n gas begin afwyk van ideale gasgedrag want die volume van die gasdeeltjies en intermolekulêre kragte begin die waarde van die volume beïnvloed, wat veroorsaak dat die gemete waarde groter is as die berekende waarde/Afstotingskragte veroorsaak dat gasdeeltjies nie nader aan mekaar kan beweeg nie

(2)

- 4.6 Low/Laag ✓

(1)

- 4.7 Temperature is an indication of the average kinetic energy of the molecules of a gas. If the temperature of a gas decreases, the molecules move slower and closer together ✓ up to a point where the gas will start to condense ✓ and not behave like an ideal gas.

OR
The intermolecular forces of attraction becomes significant ✓ then the gas condenses. ✓

Temperatuur is die aanduiding van die gemiddelde kinetiese energie van die molekules van 'n gas. Indien die temperatuur afneem sal die molekules stadiger en nader aan mekaar beweeg tot by die punt waar die gas sal begin kondenseer sodat dit nie meer soos 'n ideale gas optree nie.

OR
Die intermolekulêre kragte word beduidend en dit veroorsaak dat die gas kondenseer.
